

Air transport facilitates integration into the global economy and provides vital connectivity on a national, regional and international scale.

Air transport plays a pivotal role in promoting tourism in India and overseas by facilitating quick and efficient travel to various destination across the country.

Air transportation means the carriage of persons, property, cargo, or mail by aircraft

Air transport is one of the fastest modes of travel.

Aeroplanes can carry people, mail and light weight goods to distance places in the shortest time possible they also prove to be extremely useful during the times of natural claimites, wars and other emergencies

The worldwide air trasportation network is a critical infrastructure with high impact on mobility, trade, and economy

Its ability as an economic engine to generate and support jobs, strengthen trade and connectivity between people and countries, promote tourism and connect remote communities.

It is used for various purpose, such as business and leisure travel, the delivery of time - sensitive goods and emergency response and rescue mission.

Nowadays business around the globe are often so driven by the need for power and growth that social norms are often exchanged for market norms and even if the industry leaders agree that in the market as competitive as air travel customer experience is the main competitive advantage, basic human emotions, such as empathy are being left

The air transportation network is a complex network which has the properties of small world network and scale free networks, could be finding a shortest air transport network.

Air transportation is an important enabler to achieving economic growth and developement air transport facilities integration into the global economy and provides vital connectivity on a national, regional and international scale It helps generate trade, promote tourism and create employment opportunities For that we invest less and get more

Unlocking insights

into the global air

transportation

network

An aircraft can fly to any location without seeing any natural obstracles or barriers. since customs formalties are easily compiled. It eliminates the used for more time to seek clearance. Air travel is used for relief operations during earthquakes, floods, acidentes and faminies.

Air travel is considered to be the most expensive means of transportion. The cost of maintaining aircraft is higher and the cost for the building of aerodromes and anions are much higher.

We are doing this project to reduce travel hassles and keep people travelling safely.

High standard of protection with a low risk of robbery and injury shipping by air has a high degree of security since airport safely restrictions on cargo are strictly enforced. Tightly controlled airpoert control also minimise cargo theft and loss.
